Contents

List of Notation **vii**

Preface **xi**

I Algorithms **1**

1 Introduction to Algorithms and Analysis **3**
1.1 Complexity 6
1.2 Leading-Order Behavior 15
1.3 Summation 21
1.4 Reindexing and Changing Order of Summation 26
1.5 Nested Loops 32
1.6 *Additional Techniques of Summation 40
1.7 Products and Counting 47
1.8 Division and Divisors 52
1.9 Primes and Remainders 58
1.10 Divide and Conquer 65
1.11 Proof of the Master Theorem 74
Exercises 78

2 Asymptotic Integrals **89**
2.1 The Gamma Function and Stirling's Approximation 89
2.2 *The Beta Function and Laplace's Method 96
2.3 *Laplace's Method and Stirling Improved 101
Exercises 107

3 Data Structures **113**
3.1 Theory of Graphs 114
3.2 Trees and Tree-Based Data Structures 120
3.3 Search Trees 125
3.4 Priority Queues and Heaps 132
3.5 *B-Trees 138
Exercises 144

4 Combinatorial Optimization **149**
4.1 Dynamic programming 151

4.2 Graph Search Algorithms . . . 156
4.3 Minimum Spanning Trees . . . 166
4.4 Huffman Encoding . . . 171
4.5 Hard Problems . . . 181
Exercises . . . 190

5 Probability **195**
5.1 Probability Theory . . . 195
5.2 Conditional Probability and Bayes' Rule . . . 201
5.3 Independence, Paradoxes, and Pitfalls . . . 208
5.4 Discrete Random Variables . . . 216
5.5 Discrete Distributions . . . 223
5.6 Continuous Random Variables . . . 231
5.7 Multivariate Random Variables . . . 239
Exercises . . . 247

6 Probabilistic Sampling and Estimation **257**
6.1 Estimation . . . 258
6.2 The Law of Large Numbers . . . 265
6.3 The Central Limit Theorem . . . 271
6.4 *Proof of the Central Limit Theorem . . . 278
6.5 Bayesian Statistics . . . 281
Exercises . . . 290

7 Random Algorithms **295**
7.1 Monte Carlo Methods . . . 295
7.2 Importance, Inversion, and Rejection Sampling . . . 302
7.3 Hashing . . . 309
7.4 *Simulated Annealing . . . 315
7.5 *Genetic Algorithms . . . 322
Exercises . . . 329

II Approximation **335**

8 Harmonic Analysis **337**
8.1 Complex Numbers . . . 340
8.2 Fourier Series . . . 346
8.3 *Trigonometric Fourier Series . . . 353
8.4 Convergence of Fourier Series . . . 357
8.5 The Discrete Fourier Transform . . . 361
8.6 Convolution . . . 371
8.7 Periodic Sampling Theorem . . . 376
8.8 Haar Wavelets . . . 383
8.9 Discrete Haar Wavelet Transform . . . 391
8.10 *General Wavelets . . . 397
8.11 *General Fast Wavelet Transform and Examples . . . 403
Exercises . . . 411

9 Polynomial Approximation and Interpolation 423
9.1 Polynomial Approximation . . . 424
9.2 Interpolation . . . 428
9.3 Orthogonal Polynomials for Approximation . . . 437
9.4 Interpolation and Approximation Error . . . 445
9.5 Fast Chebyshev Interpolation . . . 453
9.6 Integration by Interpolation . . . 461
9.7 Clenshaw–Curtis and Gaussian Quadrature . . . 468
Exercises . . . 474

III Interlude 481

10 Review of Multivariate Differentiation 483
10.1 Directional, Partial, and Total Derivatives . . . 483
10.2 Properties of Derivatives . . . 488
10.3 Implicit Function Theorem and Taylor's Theorem . . . 494
Exercises . . . 499

11 Fundamentals of Numerical Computation 503
11.1 Floating-point Arithmetic . . . 503
11.2 A Brief Review of Conditioning . . . 511
11.3 Stability of Numerical Algorithms . . . 517
11.4 Computing Derivatives . . . 524
Exercises . . . 532

IV Optimization 539

12 Unconstrained Optimization 541
12.1 Fundamentals of Unconstrained Optimization . . . 542
12.2 One-dimensional Numerical Optimization . . . 550
12.3 Gradient Descent . . . 557
12.4 Newton and Quasi-Newton Methods . . . 564
12.5 The BFGS Method . . . 571
12.6 Conjugate-Gradient Methods . . . 579
12.7 *Convergence of the Conjugate-Gradient Method . . . 586
Exercises . . . 590

13 Linear Optimization 599
13.1 Convex and Affine Sets . . . 599
13.2 Projection, Support, and Separation . . . 605
13.3 Fundamentals of Linear Optimization . . . 610
13.4 The Simplex Method I . . . 618
13.5 The Simplex Method II . . . 626
13.6 Duality . . . 633
Exercises . . . 640

14 Nonlinear Constrained Optimization 647

14.1 Equality-constrained Optimization . . . 648
14.2 Lagrange's First-Order Condition . . . 654
14.3 Lagrange's Second-Order Conditions . . . 659
14.4 Karush–Kuhn–Tucker First-Order Conditions . . . 665
14.5 *Second-Order KKT . . . 672
14.6 Removing Affine Constraints . . . 675
14.7 Numerical Methods for Constrained Optimization . . . 683
Exercises . . . 687

15 Convex Analysis and Optimization 695
15.1 Convex Functions . . . 696
15.2 Jensen's Inequality . . . 701
15.3 Fundamentals of Convex Optimization . . . 707
15.4 Weak Duality . . . 713
15.5 Strong Duality . . . 719
15.6 Interior Point Methods I: The Barrier Method . . . 726
15.7 Interior Point Methods II: The Primal-Dual Method . . . 732
Exercises . . . 738

16 Dynamic Optimization 747
16.1 Finite-Horizon Cake Eating . . . 748
16.2 Dynamic Optimization Problems and Value Iteration . . . 755
16.3 Infinite-Horizon Dynamic Optimization . . . 762
Exercises . . . 771

17 Stochastic Dynamic Optimization 775
17.1 Markov Decision Processes . . . 775
17.2 Bandit Problems . . . 781
17.3 Thompson Sampling . . . 787
Exercises . . . 793

A The Greek Alphabet 797

Bibliography 799
