

005 Dr. V is a very good teacher. His lectures helped me to understand difficult concepts. He teaches with enthusiasm and brings his love of the gospel into the classroom, thank you Dr. V.

005 The class was great and I enjoyed having a math instructor that was so excited about the material and helping the students. This was by far my favorite math class. This was also the first math class that I have taken when the gospel was brought in to the classroom and I really enjoyed the learning environment.

005 Brother Villamizar is an awesome prof. who truly cares about his students and goes the extra 1,000 miles for them. This material is not easy by any sense of the terms, but it does help when you know that the prof. cares about you and how you're doing. I would totally recommend Brother Villamizar to anyone who has to take a math class.

Brother Villamizar deserves "two thumbs way way up!" He really encourages you to understand the material not just be able to cough up answers, which makes this material more difficult but more rewarding

001 It was hard for me to understand Professor Villamizar because he just assumed that everyone in the class had an in-depth understanding of advanced calculus and physics. It would have been better if he had started on a lower level and worked his way up, instead of just plunging into material that was very difficult to learn at that point. Also, the assignments, quiz schedules, and tests ate up WAY too much time. I've never spent so long on a class, and the amount of time that was required was impossible for me to give with everything else that I was doing. Someone should warn incoming students that this class eats up tons of time

001 This course was very challenging but the instructor showed a great concern for us. **The homework sessions were the most useful for me.** I liked the explanations in the text but I felt many of the problems were far too difficult without giving enough answers. Luckily, the instructor helped us out.

001 He really cares about whether or not you have learned the subject matter, not just about what grade you are getting. He teaches with the intent of helping each and every student understand what is going on, not just to get through the material. Excellent teacher. Tough course, but worth it. I recommend Prof. Villamizar to my friends.

001 Professor V. was great...he taught a difficult and not-so-fun to learn subject and made it easier for us to understand. While the class was my hardest, it also made me grow the most because I had to evaluate what was most important in my life at the time and go from there.

005 Very difficult course. Possibly the most difficult course I have ever taken (I am a Junior). I expect to get a B+ or an A- even though I spent 10+ hours a week studying. However, I also learned a great deal in this course and my understanding of math has increased more than from any other class. I basically got what I put in. For the most part though, I was unable to complete homework assignments on my own and had to spend time in the math lab.

005 Dr. Villamizar is a wonderful man. My poor grade in the class is only my fault. I think his exams were harder than traditional exams, but he gave us ample warning and opportunity to do just as well on them as any other. He is firmly dedicated to the betterment and learning of his students along the path of the Gospel. I very sadly regret my neglect in the class. I could have learned monumental amounts more if I would have only done what he asked. Fine job, Professor. Please forgive me for not doing my part.

005 This has been my favorite math class ever. It is obvious that Dr. Villamizar loves the subject and loves the students, and he does a great job in his efforts to get the students and the subject to fuse. He teaches in a way that makes you want to understand the concepts and master the skills. I think any negative comments from students will be because they want teachers to give them all the answers so they can score well on the tests, and they miss the real goal of education. I think anyone who took the time to learn and examine the way Dr. Villamizar teaches will see that this is one of the most incredible learning experiences one can find. Maybe the most amazing part is that I left with a stronger testimony, which I almost didn't believe was possible from a math class.
